## Aero Mark is proud to announce our NEW Husky Signature IFR Panel

Our new Signature IFR Panel was designed at the request of customers who desired a complete integrated engine monitoring system and a IFR certified Garmin GNS430 mounted in the panel. This panel with Aviat's NEW heated pitot/static option extend the capabilities of the Husky even further.

The Signature IFR Panel includes a custom, laser cut panel which is stronger than the original, designed for ease of scan, heat treated powder coating and silk screening for durability, IFR certified GNS430/GI-106A, GTX-327 transponder with encoding, PM1000 II intercom, LC-2 clock, full gyro panel, custom radio box, VM1000 engine monitoring system, and light wedges.

The Signature Panel is a desired option for law enforcement applications, as well as other applications requiring additional radios and equipment under the panel that are mission specific.

Give us a call and discuss your requirements.

Aero Mark's NEW Signature IFR Panel is here!
